Black **TLG** SR **.25** SRI **22**

RICH COLOR DEPTH

Low-gloss coatings often produce deeper, more dynamic color tones compared to high-gloss finishes. This allows architects to incorporate **subtle color variation** and visual texture across large roof surfaces.

SR = Solar Reflectivity / **SRI** = Solar Reflective Index

*Note: Actual colors may vary, samples available upon request.

TEXTURED LOW GLOSS FINISH

SOPHISTICATED MATTE APPEARANCE WITH TEXTURE

The Textured Low Gloss (TLG) finish delivers the best of both worlds, combining the superior color retention and vibrancy of a PVDF paint system with the gritty, tactile surface previously only available in SMP finishes.

The result is a sophisticated matte appearance that feels as refined as it performs, reducing visible oil canning while enhancing the clean lines of modern architectural design. For specifiers and contractors who demand low-gloss aesthetics without sacrificing durability or walkability, TLG sets a new standard in premium metal roofing coatings.
